Introduction

The U. S. Environmental Protection Agency was created by reorganization plan in December, 1970. The Library Systems Branch became operational in June of the following year and planning for a comprehensive book catalog began almost immediately.

From the outset, building the catalog has been a centralized function. Beginning in January, 1972, copies of L.C. catalog cards (actual or xerox) were sent to the EPA Library Systems Branch office and the necessary information was coded into the computer system designed and implemented for this purpose by Lester P. Needle, then a member of the EPA Management Information and Data Systems Division. All input was carefully checked against the Library of Congress collection and original cataloging was performed where required.

In September, 1973, the first catalog was printed, reflecting the holdings of 6 libraries within the system. Working from that base, the remaining libraries submitted their holdings and the final computer input for the 28 libraries was completed in November, 1974. The catalog lists the books owned by each location at the time EPA was formed, through July, 1973. It includes 13,390 unique titles and 52,162 associated records, of which 23,921 represent holdings. Subsequent holdings appear in the accessions listings and cumulations of the current centralized cataloging program.

Please note that the catalog reflects the holdings of each library at the time of submission. In the interim, the collections may have been purged. A listing here does not necessarily mean that the title will be available forever at any given location.

Every effort has been made to avoid the use of abbreviations in titles, substituting complete words instead. For example, in most instances "U.S." has been expanded to read "United States." However, some inconsistency in the file does exist.

The entire catalog and its indexes are available on COM (42x), as well as in hard copy and regular 24x microfiche from the National Technical Information Service (NTIS).

Thanks are due to the staff of each library in the EPA Library System for their willingness to cooperate in an undertaking of this magnitude. The initial computer records were input by Beverly Burt and Darlene Beranato. Barbara Pedrini had overall responsibility for cataloging and bibliographic citation verification, as well as quality control of the project. Mary Patterson did the final computer input and edited, corrected and maintained control of the master files during processing.

Sarah M. Thomas

How to Use the Catalog

The Book Catalog of the U. S. Environmental Protection Agency Library System has been published in two volumes. Volume I is the full catalog, listing alphabetically by title the complete entry for each book owned by any of the EPA libraries. The title is printed in bold face type. Directly underneath, left justified, appears the call number (according to the Library of Congress Classification Scheme). At the far right of the same line is the publisher. The next line, in italics, reflects the author(s) and may be followed by an entry showing symposium data, subtitle, series, or other notes (not applicable to each title). The subject headings assigned to the book appear next, indented, one per line. The next line, indented still further, lists the code number for the holding library, pertinent volumes and/or editions, the date(s) of publication and, where appropriate, a call number used by the holding library which differs from the Library of Congress classification.

Volume II of the Book Catalog consists of Part 1, the Author Index, and Part 2, the Subject Index. The Author Index lists each author in alphabetical order. Indented beneath each name, alphabetically, appear the titles of the works of each author, followed by the call number for each title, in italics.

The Subject Index (Volume II, Part 2) lists, in alphabetical order, the subject headings assigned to the books in the catalog. Indented beneath each subject, alphabetically, appear the titles associated with it, followed by the call number, in italics, for each title.

The complete entry for items listed in the Author or Subject Indexes may be obtained by consulting the full catalog, where the appropriate title will be listed alphabetically. The holding libraries may be identified by referring to the List of EPA Libraries.

Each library has an additional part of the Book Catalog, published separately, which lists its own holdings in call number order (per the Library of Congress Classification Scheme). This list is used for inventory purposes and may be consulted as necessary by any user.
